

## FOR EDI & INTEGRATION NETWORKS

# Turn your data pipes into the buy.

EDI networks move the transactions, POs, ASNs, and the 852 product-activity data that carries real sell-through. That is demand signal in motion. Tightly turns it into a plan and sends POs back out through you. **You move the documents; Tightly turns them into decisions.**

## HOW TIGHTLY FITS

### 1 · INGEST

#### From your network

Tightly reads 850 POs, 852 sell-through / on-hand and 856 ASNs as demand signal.

### 2 · PLAN

#### In Tightly

ML forecast + merchandise plan reconciled against that live signal.

### 3 · TRANSACT

#### Back through you

Tightly generates POs and replenishment that flow back out over EDI.

- ✦ 852 product-activity data is one of the richest demand signals in retail, and most of it sits unused. **Tightly makes it decide the buy.**

## MUTUALLY BENEFICIAL, THREE WAYS

### FOR THE PLATFORM

- Your data becomes a decision, not just a pipe.
- More transaction volume, Tightly-generated POs flow over your network.
- A planning partner your customers ask for.

### FOR YOUR CUSTOMERS

- The 852 / POS data they already exchange, finally driving the forecast.
- One plan across every trading partner.
- Fewer stockouts and cleaner replenishment.

### FOR TIGHTLY

- A clean demand signal at scale.
- Distribution into your trading-partner base.
- Standards-native data, no custom rails.

### THE INTEGRATION

Tightly consumes 850 / 852 / 846 / 856 as forecast input and emits POs and replenishment back over your network. Standards-native, no bespoke connectors.

### THE ASK

**A 30-minute session to scope a pilot on two or three shared trading partners.**

Then a referral motion and a certified listing.
